

in-line H₂.REDOX.pH

We offer you a unique combination 3-in-1:

- low **REDOX** potential (below – 100 mV)
- high concentration of dissolved **hydrogen** (above 100 µg/l)
- optimal **pH** 8,0-9,5

What is REDOX?

It is a short name for reduction-oxidation reaction. Water with low REDOX potential can reduce number of free radicals which can cause aging and cell degeneration.

Dissolved hydrogen is the strongest antioxidant removing harmful radicals.

Redox cartridge helps to obtain **alkaline water** which is absorbed more effectively by human body.

technical parameters

width	245mm
diameter	50mm
weight	230g
packing	25pcs/box
max. pressure	8,5bar (125psi)
max. temperature	38°C
service life	2.000G or every 6 months
max. water flow	1GPM

With **REDOX in-Line Cartridge** your filtration system will provide you purified water with **SPECIAL** benefits for your health and body!
